

**Ohio Department of Natural Resources**  
**RARE NATIVE OHIO PLANTS**  
**2022-23 Status List**

The attached list of Ohio endangered, threatened, potentially threatened, and presumed extirpated native plant taxa was determined by the Department of Natural Resources, Division of Natural Areas and Preserves with the advice and guidance of the Ohio Rare Plants Advisory Committee pursuant to Ohio Revised Code Chapter 1518. This list replaces the 2020-21 status list.

The list is divided into six phylogenetic groups: Lichens, Bryophytes, Lycophytes, Pteridophytes, Gymnosperms, and Angiosperms. Within each group, species are in alphabetic order by genus. Taxonomy and nomenclature of vascular plants (Lycophytes, Pteridophytes, Gymnosperms and Angiosperms) generally follow The Flora of North America (1993+), Voss and Reznicek (2012) or Alan Weakley and others (2022). Vascular taxa not included in these four manuals are followed by a specific reference. Taxonomy and nomenclature of the non-vascular plants follow Anderson, Crum and Buck (1990), Flora of North America (1993+) and Anderson (1990) for bryophytes, and Brodo, Sharnoff and Sharnoff (2001) for lichens. Valuable taxonomic references specific to Ohio include Snider and Andreas (1996) for bryophytes, Showman and Flenniken (2004) for lichens, and Cooperrider, Cusick and Kartesz (2001) for vascular plants. The columns marked OH and US indicate status of the taxon as assigned by the Division of Natural Areas and Preserves (Ohio Administrative Rules 1501:18-1-01 through 1501:18-2-05) and by the U.S. Fish & Wildlife Service.

The current list contains 93 presumed extirpated, 271 endangered, 159 threatened, and 92 potentially threatened taxa, plus 24 taxa with status under review. Only data from January 1, 2002 through December 31, 2021 were considered in assigning endangerment status based upon information in the Ohio Natural Heritage Database.

The first status list, issued in 1980, was largely based on preliminary lists of rare plant species compiled in the 1970s for the Ohio Biological Survey. Since 1980, the status lists have been updated biennially. This list became effective on **November 1, 2022** and will be revised again in **2024**.

Information on these 644 species is contained in the Ohio Natural Heritage Database and is generally accessible for research or environmental review by visiting <https://ohiodnr.gov/discover-and-learn/safety-conservation/about-ODNR/real-estate/environmental-review>.

Field work leading to improvements in this list was supported in part by grant from the Ohio Department of Transportation and the Ohio Income Tax Donation Program. The Division would appreciate additional information that would improve the accuracy of this list, including information on newly discovered occurrences of these plants and current conditions of known populations. Please contact the Division of Natural Areas and Preserves if you have questions or information concerning these species at 614-265-6419 or [naturalareas@dnr.ohio.gov](mailto:naturalareas@dnr.ohio.gov).

## OHIO STATUS DESIGNATION CRITERIA

### E Endangered Species

A native Ohio plant species may be designated endangered if, based on its known status in Ohio, one or more of the following criteria apply:

1. The species is a federal endangered species extant in Ohio.
2. The natural populations of the species in Ohio are limited to three or fewer occurrences.
3. The distribution of the natural populations of the species in Ohio is limited to a geographic area delineated by three or fewer U.S. Geological Survey 7.5 minute quadrangle maps.
4. The number of plants in all the natural populations of the species in Ohio is limited to one hundred or fewer individual, physically unconnected plants.

### T Threatened Species

A native Ohio plant species may be designated threatened if, based on its known status in Ohio, one or more of the following criteria apply:

1. The species is a federal threatened species extant in Ohio but not on the state endangered species list.
2. The natural populations of the species in Ohio are limited to no less than four or more than 10 occurrences.
3. The distribution of the natural populations of the species in Ohio is limited to a geographic area delineated by no less than four or more than seven U.S. Geological Survey 7.5 minute quadrangle maps.

### X Presumed Extirpated Species

A native Ohio plant species may be designated presumed extirpated when no natural populations of the species have been documented since 2000.

### P Potentially Threatened Species

A native Ohio plant species may be designated potentially threatened if one or more of the following criteria apply:

1. The species is extant in Ohio and does not qualify as a state endangered or threatened species, but it is a proposed federal endangered or threatened species or a species listed in the *Federal Register* as under review for such proposal.
2. The natural populations of the species are imperiled to the extent that the species could conceivably become a threatened species in Ohio within the foreseeable future.
3. The natural populations of the species, even though they are not threatened in Ohio at the time of designation, are believed to be declining in abundance or vitality at a significant rate throughout all or large portions of the state.

### U Status Under Review

A native Ohio plant species recently added to the rare plant inventory and sufficient information has not yet been obtained to determine the Ohio endangerment status.

## FEDERAL LISTED OHIO PLANT SPECIES

Ohio-selected scientific and common names are listed first. Federal-selected names are shown in parentheses if they differ from the names on the Ohio list.

FE = Federal endangered

FT = Federal threatened

Note: Lists and information about federal listed, proposed and candidate species can be obtained from the U.S. Fish & Wildlife Service web site at <https://fws.gov/>. At this time, there are no Ohio plants designated as either proposed for listing or on the federal candidate species list.
